

# The Worst Days: Peaks in Confirmed Daily Deaths Due to COVID-19 So Far

Each panel shows the trajectory of confirmed deaths due to COVID-19 as percentage of daily deaths relative to the *worst day so far* for countries with at least 500 reported deaths.

For each day, starting with the date of first reported death, the 7-day rolling average of confimed deaths per day is divided by the **highest average number of daily deaths so far defined as 100%**. The text labels show the day of the first cofirmed death due to COVID-19 and the overall death toll per country.

Note: Charts contain all confirmed deaths due to COVID-19 from January 22<sup>nd</sup> to June 21<sup>st</sup> 2020 for countries with 500 or more deaths.  
\* The deaths reported on April 17<sup>th</sup> in Wuhan, China, have been added proportionally to the confirmed daily deaths until that date.

^ On June 19<sup>th</sup> the Spanish Ministry of Health has issued a revised death total for Spain. The deaths have been added proportionally to the daily confirmed deaths of Spain until that date.
