

The Worst Days: Peaks in Confirmed Daily Deaths Due to COVID-19 So Far

Each panel shows the trajectory of confirmed deaths due to COVID-19 as percentage of daily deaths relative to the *worst day so far* for countries with at least 200 reported deaths.

For each day, starting with the date of first reported death, the 7-day rolling average of confimed deaths per day is divided by the **highest average number of daily deaths so far defined as 100%**. The text labels show the day of the first cofirmed death due to COVID-19 and the overall death toll per country.
