The Worst Days: Peaks in Confirmed Daily Deaths Due to COVID-19 So Far

Each panel shows the trajectory of confirmed deaths due to COVID-19 as percentage of daily deaths relative to the worst day so far for countries with at least 50 reported deaths.

For each day, starting with the date of first reported death, the 7-day rolling average of confimed deaths per day is divided by the highest average number of daily deaths so far defined as 100%. The text labels show the day of the first cofirmed death due to COIVD-19 and the overall death toll per country.
