# The Worst Days: Which Countries are Currently Experiencing the Highest Number of Confirmed Daily Deaths Due to COVID-19 So Far?

COVID-19 death cases relative to each country's highest daily death toll so far

0.1% of daily max   25% of daily max   50% of daily max   75% of daily max   Worst day so far

The visualization shows countries with at least 100 reported deaths due to the corona virus disease (COVID-19). The color intensity for each day and country is estimated as the number of deaths on this particular day divided by the highest daily death toll so far. The countries are ranked by time since the latest "worst day" and number of reported daily deaths. Days that are better than the day before (i.e. less confirmed daily deaths) are colored in grey to visulize decreasing trends and potential periodicity in the data.
* On April 17th 2020, officials in Wuhan, China, revised the city´s coronavirus death toll. The deaths have been added proportionally to the daily confirmed deaths of China until that date.
